PRODUCT BULLETIN

Date: September 10, 2007
To: VPI Corporation Distributors
Subject: Adhesive Change

Dear Valued Distributor Partner:

This Product Bulletin announces an adhesive change from VPI. Our #230 adhesive will be discontinued, effective immediately.

Our recommended adhesive for installations of rubber flooring previously using VPI #230 adhesive, as well as static control tile patterns that are installed as solid vinyl tile (SVT) floors not requiring the electrical properties gained using either our #150 or #160 conductive adhesive, is VPI #100 epoxy.

Tests indicate that VPI #100 epoxy has superior bond strength and can be used for both product groups mentioned above. This change provides a reduction in adhesive stock units for both VPI and our distributors.

Thank you for your continued support of VPI Corporation.

Sincerely,

A handwritten signature in blue ink that reads 'Tom Reese'.

Thomas H. Reese
Vice President – Sales
VPI Corporation
