Surface Cleaner Additional Information

Description:

VPI Surface Cleaner is the second step in the overall VPI Flooring Initial Maintenance System. VPI Surface Cleaner, used in conjunction with the VPI Surface Cleaning Pad (natural in color, with black strands) — micro-cleans the surface of the tile resulting in a great visual appearance and optimal performance. ***VPI Surface Cleaner should be used only after the Deep Scrub process is completed.***

Directions for Use with VPI Tile Only:

After first completing the Deep Scrub process, place the VPI Surface Cleaning Pad (natural in color, with black strands) onto low speed floor machine. Mist VPI Surface Cleaner, using the mist setting on a trigger sprayer, over the area to be cleaned. With the low speed machine, use the initial pass to evenly distribute the cleaner over the intended area to be surface cleaned (about a 10'x10' area at a time) — then begin buffing action. Buff the area using an even back and forth motion. Approximately 5 passes per row should properly clean the surface but take extra passes to assure complete surface uniformity. Continue the process until the surface of the entire area has been cleaned and is visually acceptable. If desired, repeating Surface Cleaning process a second time will maximize cleaning and appearance.

Note:

It is very important to follow the specific directions for cleaning VPI Tile. Treating it otherwise, can negatively impact visual appearance and electrical performance. **IMPORTANT: Never buff in excess of 375 RPM.**

Safety:

General Advice: First Aid responders should pay attention to self-protection and use the recommended protective clothing (chemical resistant gloves, splash protection).

Inhalation: Remove person to fresh air. If you feel unwell, get medical attention.

Skin Contact: In case of contact, immediately flush with plenty of water. If irritation occurs and persists, get medical attention.

Eye Contact: Immediately flush eyes with water; remove contact lenses, if present, after the first 5 minutes, then continue flushing eyes for at least 15 minutes. Obtain medical attention without delay, preferably from an ophthalmologist. Suitable emergency eye wash facility should be immediately available.

Ingestion: Rinse mouth. If you feel unwell, get medical attention.

Ingredients:

This product is a mixture.

Components: Trade Secret #00205MA104

CAS No.: Trade Secret

Concentration: 1-5%

Deep Scrub Additional Information

Description:

Deep Scrub is the first step in the overall VPI Flooring Initial Maintenance System. Used in conjunction with the VPI Deep Scrub Pad (maroon in color) it deep cleans, preps, and conditions any new VPI tile floor by thoroughly removing deep down manufacturing residue and ground in installation debris.

Deep scrub cleaning, using VPI Deep Scrub, is required before applying surface cleaner to the floor.

VPI Initial Deep Scrub Cleaner meets or exceeds green industry standards for floor care products based on its reduced levels of volatile organic compounds, biodegradability, and low toxicity.

Directions for Use with VPI Tile Only:

For newly installed VPI tile, sweep or dust mop the floor to remove any large debris. Never use oil base treated dust mops. (See VPI ONGOING CLEANER instructions for how to clean previously installed VPI tile).

Dilute VPI Deep Scrub (1 part cleaner: 10 parts water) or 13 oz./gal with cool clean water and apply liberally to the floor. Using the VPI Deep Scrub Pad (maroon in color), agitate floor thoroughly with a low-speed rotary machine or automatic scrubber. Approximately 5 passes are required to properly deep scrub the floor. Make sure floor remains very wet. NOTE: Place a “floater pad”, such as a standard red pad, underneath the VPI Deep Scrub Pad (maroon in color), before beginning the scrubbing process. This will enhance cleaning.

Pick up the solution with a wet vacuum, automatic scrubber, or a mop and bucket. Rinse with clear water only. Allow floor to dry completely before starting the surface cleaning process using VPI Surface Cleaner in conjunction with VPI Surface Cleaning Pads per VPI's written instructions.

Note:

It is very important to follow the specific directions for cleaning VPI Tile. Treating it otherwise, can negatively impact visual appearance and electrical performance. **IMPORTANT: Never buff in excess of 375 RPM.**
